

Feedback for Homework#1 report (pdf)

Dropbox Feedback

P1:

1a: good

1b: (2) -1 no computational complexity analysis

-1 no RGB channel correlation analysis

1c: (2) -1 transfer function y maximum should be 1

P2:

(a)

~~(2) Inaccurate PSNR peak position for mean filter; no PSNR for Gaussian filter with window size = 1 (-1);~~ good discussion about sigma effect (+0).

(3) Insufficient discussion about parameter effects (-2).

(4) Insufficient discussion about computational complexity (-2).

(b) Very detailed illustrations!

(3) As you wrote, median filter should go first, so the answer is no (-0).

(4) Interesting proposal but it may be better to directly use advanced filters, sometimes thresholding seems to be not very likable (-1).

(c) Good and detailed!
