

An additional task for your HW5

Posted Mar 25, 2019 11:25 AM

Dear all,

You need to compute the mean and variance of your final training and testing accuracies over the 5 settings you tried in part b). That is, you need to include in your report: 1) the final training and testing accuracies of each setting; 2) the final training and testing accuracies of the best setting; 3) the mean and variance of your final training and testing accuracies over the 5 different settings.

Best regards,

Ruiyuan
